INFINITE POSSIBILITIES

Watch that  
empty terrace  
transform into a  
work-from-home  
studio in days!

PRESENTING  
EcoWasp Terrace Homes.

# The experts in **Paper Honeycomb Superstructure** are here to make your Terrace Home.

## Introducing **EcoWasp** Technology, an eco-friendly standard

Strategically aligned paper hexagons create a honeycomb superstructure that gets strength and stability like concrete. It is nature's own secret to give us the most durable structure known.

Our Labs has crafted this structure close to perfection with over a decade of research. The honeycomb is further enhanced with precision Joinery solutions for composite materials to produce a variety of panels. These integrated panels are the building blocks that craft your home like a dream.

Office Space of 170 sft,  
In Domlur, Bangalore

Built in 2021 in 7 days

Terrace studio home of 150 sft,

INFINITE POSSIBILITIES

## **EcoWasp Technology is the base for Aerospace too.**

A unique alternative with extraordinary benefits, Honeycomb structures are used in the Space and Aviation industry for superior strength and safety.

Our Paper Honeycomb Superstructure is the challenger to monolithic materials like stone, concrete and steel. It's also a replacement for conventional foam cores. Give your dream terrace home the advantage of the new light-weight, hyper-strength, super-material in construction design with EcoWasp technology.
